WWW.DRSLABORATORIES.COM

You, as part of the **Certification Industry**, provide necessary services for health, pharmaceutical, government and academic institutions.

DRS Laboratories offers to help **you** in two, very different ways. This packet provides information and options that we trust you will find of interest and useful.

- **DRS Mini – Chlorine Dioxide System (MCS)**: a tool set providing faster and easier decontamination services for biological safety cabinets and other containment devices.
- **DRS Decontamination Services**: providing knowledge and capability so that your organization can provide larger-scale decontamination services to your clients.

The attached brochures provide the following:

1. Detailed information concerning the **MCS**, demonstrating the advantages this system offers directly to your company in **reduced labor costs, improved service to your customers, and increased profitability**.
2. Detailed information for your clients* on how using **chlorine dioxide** gas in place of formaldehyde for BSC decontamination improves their bottom line.
***Feel free to make multiple copies of this brochure with your logo and contact information for distribution to your current and potential customers.**
3. Detailed information on how **DRS** can help you in acquiring and delivering larger-scale decontamination projects for current and potential customers.

For more information, contact us at 1-888-377-1533 or info@drslaboratories.com or visit our web-site at www.drslaboratories.com
