More EXCITING Uses for the MCS

Did you know that you can now complete **large volume decontaminations** of up to 2,700 cf³ with ONE MCS?

With assured minimal leakage and the ability to vent to ambient air, you can now achieve this type of decontamination with your MCS!

Please ask a DRS representative for more information or contact us at our information on the back.

DRS has now confirmed small volume decontaminations with the MCS for use on items like “HEPA Drain Vent Filters”

The MCS can quickly and easily decontaminate your Containment HEPA Drain Vent Filters utilizing the DRS In-Line Humidification Holder and the DRS In-Line Temp/RH and BI Holder, along with some strategically designed connections.

DRS has specially designed CD Generation Chemical packs for your smaller cf³ needs.

Bag In-Bag Out Exhaust HEPA Filter Banks

The MCS *continues* to be the top contender in performing this type of decontamination.

By utilizing the DRS In-Line Humidification Holder and the DRS In-Line Temp/RH and BI Holder, the MCS is quickly becoming a well known and efficient way to perform your HEPA Bank decontaminations.

The MCS is *truly* the ONLY way to complete ALL of your Chlorine Dioxide Decontaminations.
